

Soft Metais Conflict Free Policy

Soft Metais Ltda. was founded in 1986 by engineers who were always dedicated to melting of tin minerals and refining of tin metal. Today is a leading manufacturer of tin based alloys in the Brazilian market. With its own headquarters in the city of Bebedouro, in the northern state of São Paulo, is installed in a land area of 20,000 m² with 3,500 m² of built area, and uses only tin in the form of ingots and other non-ferrous metals to manufacture about 600 different items in various fields of use of tin alloys.

Soft Metais Ltda. possesses no tin minerals reduction furnaces nor furnaces for reduction of oxides of any kind, and buy 100% of its tin ingots, crude or refined, already processed exclusively in COOPERSANTA and Magnus Minerals. These companies are audited and included in the list of "active smelters" from the CFSP (Conflict-Free Smelter Program), and the tin minerals processed on these companies come only from mines duly established and licensed in the states of Pará and Rondônia in Brazil. Eventually some tin refining is done in our manufacturing facilities, and the surplus tin is sold in the form of ingots to companies located in Brazil or abroad.

Soft Metais Ltda. is aware and supports the initiative of the EICC - Electronic Industry Citizenship Coalition in order to track and ensure that all sources of minerals and metals used in their production line are sourced from reliable sources outside the conflict zones cited, i.e., DRC – Democratic Republic of Congo and neighboring countries. Soft Metais Ltda supports all initiatives and follows the law in regard to the safety and protection of human rights and in straight respect for the environment.

Bebedouro, February 12nd, 2015.
